

PLAN GUIDE 4 OF 4

Enterprise Plan $148/mo

Integrations, compliance & vendor self-service for large enterprises. Everything in Business, plus 6 new features, each with its status cycle and exact click-path. Zenith Interiors has grown into a multi-project operation and now needs to connect BloomAudit to the rest of its tooling.

Scenario continues: After the Horizon HQ project, Zenith Interiors is running several projects at once and needs board-level analytics, an audit trail for a big client's due-diligence review, API integration, vendor self-service, and card controls for the growing team.

Plan target: For large enterprises · **Users:** unlimited

This is guide 4 of 4 — builds on the Starter, Growth, and Business guides.

What's Included in Enterprise

All 38 Starter+Growth+Business features, plus 6 new ones (highlighted) — this guide covers the 6 new ones in depth.

FEATURE	WHAT IT DOES
Advanced Analytics	Advanced Analytics v2 + Custom KPI Dashboards.
Compliance & Audit Log	RBAC trail + compliance reports.
API v1 & Webhooks	REST API v1 + API Key Management, plus incoming webhooks.
Vendor Self-Service Portal	Vendors submit PO acknowledgements, invoices, and see payment status themselves.
Debit Card Management	Track company debit card spend.
Everything from Starter, Growth, and Business	*Still available — see the earlier 3 guides*

Phase 4 — Scaling Up

Recap: Zenith Interiors delivered the Horizon HQ project with full HR, inventory, and project costing (Business guide). Now running multiple projects and a bigger team, Kavindu needs board reporting, compliance evidence, system integrations, and less manual back-and-forth with vendors.

1 Advanced Analytics

Reports → Advanced Analytics

What it is: Custom KPI dashboards beyond the basic Analytics view — built for reporting up to a board or investors.

DASHBOARD	TRACKS
Board Overview	**Revenue by project, margin trend, headcount cost ratio**

HOW TO BUILD IT

1. Go to *Reports → Advanced Analytics → New Dashboard*.
2. Add widgets: "Revenue by Project", "Margin Trend (Job Costing)", "Headcount Cost Ratio".
3. Click **Save Dashboard** and name it "Board Overview".

Verify: The custom dashboard combines Job Costing margin data with company-wide revenue in one view.

2 Compliance & Audit Log

Reports → Compliance & Audit

What it is: A full RBAC audit trail plus compliance reports — every permission change and sensitive action, logged automatically the moment it happens (nothing to turn on or configure).

HOW TO USE IT

1. A prospective large client asks for evidence of internal controls before signing a contract.
2. Go to *Reports → Compliance & Audit*, filter by date range and by document type "Purchase Orders".
3. Export the report as PDF to share with the client.

Verify: The Audit Log shows exactly who approved the Horizon HQ purchase orders and when, satisfying the client's due-diligence request.

3 API v1 & Webhooks — cycle

Reports → Webhooks & API

What it is: A REST API with API-key management for pulling/pushing data programmatically, plus incoming webhooks so external systems can notify BloomAudit of events.

Cycle: API key Issued (scoped to specific permissions) → Used by the integration → Revoked if compromised or no longer needed. Webhooks separately: Registered → Firing on each matching event → Disabled if paused.

FIELD	VALUE
API key	Issued to Zenith's new CRM integration, scoped to read invoices & customers
Webhook	**invoice.paid → notifies the CRM automatically**

HOW TO SET IT UP

1. Go to *Reports → Webhooks & API → API Keys → Generate Key*, scope it to "invoices:read" and "customers:read", and copy the key into the CRM's settings.
2. Go to *Webhooks & API → Webhooks → Add Webhook*, event "invoice.paid", target URL from the CRM.
3. Click **Save** — test it by marking a real invoice as paid.

Verify: The CRM receives a webhook call the moment an invoice is marked paid in BloomAudit.

4 Vendor Self-Service Portal — cycle

Purchasing → Vendor Submissions

What it is: Lets vendors log into their own portal to acknowledge purchase orders, submit invoices, and check payment status — without emailing back and forth.

Cycle: Vendor Invited → Portal access active → Acknowledges PO → Submits invoice → Accepted (becomes a Bill) or Rejected (vendor is asked to resubmit).

HOW TO SET IT UP

1. Go to *Workforce → Vendors*, open Ceylon Timber & Hardware's record, click **Invite to Vendor Portal**.
2. Ceylon Timber logs in, opens the latest PO, and clicks **Acknowledge**.
3. Once delivered, they click **Submit Invoice** against that PO.
4. Kavindu goes to *Purchasing → Vendor Submissions* and clicks **Accept** (creating a Bill automatically) or **Reject** with a reason.

Verify: The submitted invoice appears in Vendor Submissions for Kavindu to accept, with no manual data entry.

5 Debit Card Management

Banking → Card Management

What it is: Tracks purchases made on a company debit card linked to a company bank account.

FIELD	VALUE
Card holder	Nadeesha Perera
Purchase	**Online hardware order, LKR 8,500**

HOW TO SET IT UP

1. Go to *Banking → Card Management → Add Card*, link it to the Commercial Bank account, assign it to Nadeesha.
2. When she makes the LKR 8,500 online purchase, go to *Card Management → Transactions → Add Transaction* (or sync automatically if your card provider supports it) and log it.

Verify: The transaction appears on the card and reduces the linked bank account balance.

End of Enterprise — Zenith Interiors now has board-level reporting, an audit trail, system integrations, vendor self-service, and card controls, on top of everything from the previous three guides.

Full Feature Checklist (New in Enterprise)

- [ ] Advanced Analytics
- [ ] Compliance & Audit Log
- [ ] API v1 & Webhooks
- [ ] Vendor Self-Service Portal
- [ ] Debit Card Management

> **Complete:** Together, the 4 guides (Starter → Growth → Business → Enterprise) cover all 45 features across every BloomAudit plan, following one continuous company's growth from a solo freelancer to a multi-project enterprise.
