BLOOMAUDIT · PRACTICAL TESTING GUIDE

One Project, Every Module

A single realistic scenario that walks every accounting workflow in BloomAudit end-to-end — with sample data you can type in exactly as written, the exact clicks for each module, and its full status cycle where it has one — so every module connects to the same story instead of feeling like 22 disconnected tests.

Scenario: Zenith Interiors (Pvt) Ltd fits out an office for a new client, Horizon Retail Group — from the first purchase order to the invoice, the bank reconciliation, and the month-end close.

Currency: LKR (Sri Lankan Rupees) · **Period modeled:** July 2026

Modules covered: 22 — Customers, Sales Orders, Invoices, Receivables, Recurring Transactions, Purchase Orders, Bills, Vendor Submissions, Petty Cash, Subscriptions, Bank Accounts, Bank Reconciliation, Cheques, Loans, Expense Claims, Card Management, Assets, Inventory, Journal Entries, General Ledger, Trial Balance, Fiscal Periods

How to Use This Guide

Read this once before you start entering data.

This isn't 22 separate, unrelated test cases. It's **one continuous business story** — a fit-out contractor (your test company) takes on a client project, buys the materials, pays the supplier, does the work, invoices the client, gets paid, reconciles the bank, and closes the month. Every module below is a chapter of that same story, in the order it would actually happen in the real business. By the end, the numbers in your Trial Balance and General Ledger will trace back to specific, memorable events — "that's the LKR 50,000 loan to Nadeesha", not just an anonymous row in a table.

> **Each module section below has up to five parts:** a plain-English explanation of what the module is *for*, its full status **Cycle** where it has one (purple box), the exact sample data to type in, a step-by-step **How To** for the exact clicks, and a "Verify" box telling you what to look for afterwards to confirm it worked. The click-path to get there is shown as a teal pill, e.g. *Sales → Invoices*.

Go through the phases **in order** — later modules (like Bank Reconciliation) depend on transactions created in earlier ones (like the Invoice payment). If your test company already has different sample data in it, that's fine — the amounts here are illustrative; what matters is that you follow the same *chain*: Customer → Project → Purchase → Inventory → Sale → Invoice → Payment → Reconciliation → Close.

> **Tip:** If you built the new **Sandbox Mode** environment (Settings → Environment), run this entire guide there. It's seeded, isolated training data — perfect for practicing this exact workflow without touching real company records, and you can hit "Reset Sandbox Data" to start this guide over from scratch at any time.

The Cast — Master Data Setup

Create these records first. Everything else in this guide refers back to them.

YOUR COMPANY (TENANT)

Zenith Interiors (Pvt) Ltd

Office fit-out & interior contracting business. Country: Sri Lanka. Base currency: LKR.

CUSTOMER

Horizon Retail Group (Pvt) Ltd

Contact: Ruwan Jayasuriya · Payment terms: NET30 · Credit limit: LKR 3,000,000

VENDOR (MATERIALS)

Ceylon Timber & Hardware (Pvt) Ltd

Contact: Malithi Silva · Supplies desks, chairs, partition panels · NET30

VENDOR (WORKSHOP LANDLORD)

City Business Park (Pvt) Ltd

Leases Zenith's workshop/office space · Monthly rent invoice

EMPLOYEE

Nadeesha Perera — Site Coordinator

Runs the Horizon project on-site; submits expenses and takes a salary-advance loan

COMPANY BANK ACCOUNT

Commercial Bank of Ceylon — Current A/C

A/C No. 8001234567 · Opening balance: LKR 2,500,000

PRODUCT / INVENTORY ITEM	SKU	COST PRICE	SELLING PRICE
Executive Office Desk	FRN-DSK-001	LKR 32,000	LKR 45,000
Ergonomic Task Chair	FRN-CHR-002	LKR 12,000	LKR 18,500
Modular Partition Panel	**FRN-PNL-003**	**LKR 8,000**	**LKR 12,000**

Verify: Chart of Accounts (Accounting → Chart of Accounts) already has the defaults you'll need — 1000 Cash, 1010 Bank Account — Primary, 1100 Accounts Receivable, 1200 Inventory, 1600 Fixed Assets, 1610 Accumulated Depreciation, 2000 Accounts Payable, 2200 Loans Payable, 4000 Revenue, 5000 Cost of Goods Sold, 5500 Depreciation Expense. Every transaction in this guide posts to one of these.

The Story, at a Glance

Customer → Project → Purchase Order → Vendor Submission → Bill → Inventory In →
Cheque Payment → Asset Purchase → Petty Cash → Expense Claim → Loan → Card Purchase →
Sales Order → Inventory Out → Invoice → Receivable / Payment → Recurring Invoice →
Subscription (rent) → Bank Reconciliation → Journal Entry (depreciation) → General Ledger → Trial Balance →
Fiscal Period Close

Phase 1 — Win the Client, Set Up the Project

Horizon Retail Group wants their new HQ fitted out. Before you buy or sell anything, you record who they are and what job this is.

1 Customers

Sales → Customers

What it is: The record of every person/company who buys from you — their contact details, payment terms, and credit limit. Every invoice and sales order links back to a customer record like this one.

FIELD	VALUE
Name / Company	Horizon Retail Group (Pvt) Ltd
Contact person	Ruwan Jayasuriya
Email	ruwan.j@horizonretail.example.com
Payment terms	NET30
Credit limit	**LKR 3,000,000**

HOW TO ADD THE CUSTOMER

1. Go to *Sales → Customers → Add Customer*.
2. Fill in the fields above and save.

Verify: Horizon Retail Group appears in the customer list with a generated customer number (e.g. CUST-0001) and "Active" status.

2 Projects

Projects → Projects & Contracts

What it is: A container that groups every cost and every dollar of revenue tied to one specific job, so you can later ask "did this particular job make money?" instead of only seeing your business as a whole.

Cycle: Planning → Active (costs/revenue accumulating) → Completed → Closed.

FIELD	VALUE
Project name	Horizon HQ Fit-Out — Phase 1
Customer	Horizon Retail Group (Pvt) Ltd
Budget	LKR 3,000,000
Start date	**2026-07-01**

HOW TO CREATE IT

1. Go to *Projects → Projects & Contracts → New Project*, link it to Horizon Retail Group, and save.

Verify: The project shows up with LKR 0 spent / LKR 0 billed so far — you'll watch both grow through the rest of this guide.

Phase 2 — Buy the Materials (Procurement)

Zenith doesn't stock office furniture — it orders exactly what this project needs from its supplier, Ceylon Timber & Hardware.

3 Purchase Orders

Purchasing → Purchase Orders

What it is: A formal request you send to a vendor to buy goods at agreed prices. It's a *commitment to buy* — it doesn't create a payable yet, because the vendor hasn't billed you.

Cycle: Draft → Pending Approval → Approved → Sent to vendor → Partially Received / Received → Closed (or Rejected at the approval step).

LINE ITEM	QTY	UNIT PRICE	TOTAL
Executive Office Desk (FRN-DSK-001)	10	32,000	320,000
Ergonomic Task Chair (FRN-CHR-002)	20	12,000	240,000
Modular Partition Panel (FRN-PNL-003)	15	8,000	120,000
PO Total (PO-2026-0001)			**LKR 680,000**

HOW TO PLACE THE PO

1. Go to *Purchasing → Purchase Orders → New PO*.
2. Vendor: Ceylon Timber & Hardware. Link *Project: Horizon HQ Fit-Out — Phase 1*.
3. Add the three line items above and click **Submit for Approval**.
4. Click **Approve** (as Super Admin) — this emails the PO to the vendor automatically.
5. When goods arrive, open the PO and click **Receive**, entering quantities delivered.

Verify: PO status is "Sent" (or "Pending Approval" if your workflow requires it) and the project's committed cost increases by LKR 680,000.

4 Vendor Submissions

Purchasing → Vendor Submissions

What it is: A self-service portal where your suppliers log in and submit their own invoice against your PO — instead of you re-typing what they billed you.

Cycle: Vendor invited → Portal access active → Acknowledges PO → Submits invoice → Accepted (becomes a Bill) or Rejected (vendor resubmits).

HOW TO RECEIVE THE SUBMISSION

1. Invite Malithi Silva (Ceylon Timber & Hardware) to the Vendor Portal, or log in as the vendor if already invited.
2. Submit an invoice against *PO-2026-0001* for **LKR 680,000**, invoice ref *VINV-1001*.
3. Back in BloomAudit, go to *Purchasing → Vendor Submissions* and click **Accept**.

Verify: Accepting the submission automatically creates a matching Bill (next module) — you shouldn't have to re-enter the amounts.

5 Bills — full cycle

Purchasing → Bills

What it is: The vendor's actual invoice to you, recorded in your books. This is what creates a real *payable* — money you now legally owe, unlike the PO which was just an order.

Cycle: Draft → Received (goods/services confirmed) → Partially Paid → Paid. Can go Overdue if unpaid past due date, or Voided before payment.

FIELD	VALUE
Bill number	BILL-2026-0001 (from PO-2026-0001)
Vendor	Ceylon Timber & Hardware (Pvt) Ltd
Amount	LKR 680,000
Due date	**NET30 from bill date (2026-07-05)**

HOW TO PLACE THE BILL

1. Accepting the Vendor Submission above already created BILL-2026-0001 automatically — open it under *Purchasing → Bills*.
2. To raise one manually instead: *Purchasing → Bills → New Bill*, select the vendor, add line items, set bill/due dates, and save.

Verify: Accounts Payable (2000) increases by LKR 680,000. Bill status is "Open" / "Unpaid".

6 Inventory

Assets & HR → Inventory

What it is: Tracks how much stock you physically hold and its value. Receiving a PO increases stock; selling/issuing items later decreases it.

Cycle: Stock In (PO receipt) → On Hand → Stock Out (sold, or manually adjusted for damage/loss).

HOW TO RECEIVE STOCK

1. Receive the goods against PO-2026-0001 into your main warehouse (see Purchase Orders above).
2. Confirm stock levels increase: Desk +10, Chair +20, Panel +15.

Verify: Inventory (1200) on the balance sheet increases by the cost value: (10×32,000)+(20×12,000)+(15×8,000) = **LKR 680,000** — matching the bill exactly, since cost price = purchase price here.

7 Cheques — cycle

Banking → Cheques

What it is: A physical cheque payment has its own lifecycle — issued, then later cleared (or bounced) once the bank actually processes it. This module tracks that in-between state a simple bank transfer doesn't need.

Cycle: Issued → Cleared (bank honored it, confirmed during reconciliation) or Bounced (returned unpaid — reverses the bill payment).

FIELD	VALUE
Cheque number	002451
Payee	Ceylon Timber & Hardware (Pvt) Ltd
Amount	LKR 400,000 (partial payment of BILL-2026-0001)
Issue date	2026-07-10
Status	**Issued (will mark "Cleared" during Bank Reconciliation, Phase 5)**

HOW TO ISSUE IT

1. From the open Bill, choose *Record Payment* → *Cheque* and enter the details above.
2. Separately, pay the remaining **LKR 280,000** of the bill via bank transfer (dated 2026-07-12) so the bill is fully settled.

Verify: BILL-2026-0001 status becomes "Paid". The cheque shows as "Issued" until you reconcile the bank in Phase 5.

Phase 3 — Running the Job (Assets, Cash & People)

While the fit-out is underway, Zenith uses a company vehicle, small cash, an employee expense claim, a salary advance, and a company card — all real costs of doing the work.

8 Assets — cycle

Assets & HR → Assets

What it is: Big-ticket purchases that get used over several years (vehicles, equipment) instead of being expensed immediately. BloomAudit spreads their cost over their useful life as *depreciation*, a small expense recognized every month.

Cycle: Acquired → Depreciating (monthly depreciation posts automatically) → Disposed (sold/scrapped; any gain or loss posts to the GL).

FIELD	VALUE
Asset name	Delivery Van — Toyota Hiace
Purchase cost	LKR 3,200,000
Purchase date	2026-07-01
Depreciation method	Straight-line
Useful life	5 years (60 months)
Salvage value	LKR 200,000
Monthly depreciation	**(3,200,000 − 200,000) ÷ 60 = LKR 50,000**

HOW TO ADD IT

1. Go to *Assets & HR → Assets → Add Asset*.
2. Enter the fields above and save — monthly depreciation calculates automatically.

Verify: Fixed Assets (1600) increases by LKR 3,200,000. You'll post the first month's depreciation manually as a Journal Entry in Phase 5.

9 Petty Cash — cycle

Purchasing → Petty Cash

What it is: A small physical cash float kept on hand for tiny day-to-day purchases too small to justify a full bill/payment process — think nails, tape, or site tea.

Cycle: Float issued → Expenses logged against it → Replenished once it runs low, repeating indefinitely.

ITEM	AMOUNT
Float issued to site box	LKR 10,000
Nails & fixing screws	LKR 1,200
Site tea / snacks	LKR 900
Fuel for site generator	LKR 1,500
Remaining float	**LKR 6,400**

HOW TO USE IT

1. Go to *Purchasing → Petty Cash → Issue Float*, enter 10,000, save.
2. Click **Log Expense** for each of the three spends above.

Verify: Petty cash ledger shows LKR 3,600 spent against the LKR 10,000 float, leaving LKR 6,400.

10 Expense Claims — cycle

Banking → Expense Claims

What it is: How employees get reimbursed for money they personally spent on company business — fuel, meals, mileage — as opposed to petty cash, which is company money handed out up front.

Cycle: Submitted → Approved (or Rejected) → Paid.

FIELD	VALUE
Employee	Nadeesha Perera
Claim ref	EXP-2026-0001
Reason	Fuel/mileage — supplier pickup & site visits
Amount	LKR 4,500
Submitted	**2026-07-08**

HOW TO FILE AND PAY IT

1. Nadeesha submits the claim from her Employee Portal with a receipt attached.
2. Kavindu (admin) approves it under *Banking → Expense Claims*.
3. Click **Mark Paid** once reimbursed via bank transfer.

Verify: Claim status moves Submitted → Approved → Paid, and LKR 4,500 leaves the company bank account.

11 Loans — cycle

Banking → Loans

What it is: Tracks money the *company lends to an employee* — most commonly a salary advance — and the installment schedule they'll repay it on. This is the opposite direction of a bank loan; here your company is the lender.

Cycle: Requested → Approved → Active (installments deducted each payroll run) → Fully Repaid.

FIELD	VALUE
Employee	Nadeesha Perera
Loan amount	LKR 50,000
Issued	2026-07-05
Repayment	**5 monthly installments of LKR 10,000, starting July payroll**

HOW TO SET IT UP

1. Go to *Banking → Loans → New Loan*, select Nadeesha, amount 50,000, 5 monthly installments of 10,000.
2. Click **Approve** — the loan becomes Active.

Verify: The loan appears with an installment schedule; the first LKR 10,000 installment is due this period.

12 Card Management

Banking → Card Management

What it is: Tracks purchases made on a company debit card, linked to a company bank account — useful for quick online/site purchases without writing a cheque or handling cash.

FIELD	VALUE
Card holder	Nadeesha Perera (company card)
Purchase	Extra hardware & fittings (online order)
Amount	LKR 8,500
Date	**2026-07-14**

HOW TO LOG IT

1. Go to *Banking → Card Management → Add Card* (one-time setup), linked to the Commercial Bank account.
2. Log the LKR 8,500 transaction under *Card Management → Transactions*.

Verify: The LKR 8,500 transaction appears on the card and reduces the linked bank account balance.

Phase 4 — Deliver & Get Paid (Revenue)

The fit-out is complete. Now Zenith sells the finished job to Horizon Retail Group and starts collecting payment.

13 Sales Orders — cycle

Sales → Sales Orders

What it is: A confirmed order from a customer for goods/services, before you've invoiced them — the sales-side mirror of a Purchase Order. It's the commitment to sell.

Cycle: Open → Fulfilled (delivered) → Invoiced → Closed. Can be Cancelled before fulfilment.

LINE ITEM	QTY	UNIT PRICE	TOTAL
Executive Office Desk	10	45,000	450,000
Ergonomic Task Chair	20	18,500	370,000
Modular Partition Panel	15	12,000	180,000
Installation & fit-out labor (service line)	1	400,000	400,000
SO Total (SO-2026-0001)			**LKR 1,400,000**

HOW TO PLACE IT

1. Go to *Sales → Sales Orders → New Sales Order*, customer Horizon Retail Group, link *Project: Horizon HQ Fit-Out — Phase 1*.
2. Add the four lines above and save.
3. Once delivered, click **Mark Fulfilled**, then **Create Invoice from Sales Order**.

Verify: Inventory issues 10 desks / 20 chairs / 15 panels out of stock against this order — Inventory (1200) drops back to zero for these SKUs.

14 Invoices — full cycle

Sales → Invoices

What it is: The bill you send to a customer for goods/services delivered. This is what creates a *receivable* — money the customer now owes you.

Cycle: Draft → Sent → Partially Paid → Paid. Also possible before fully paid: Void (cancelled) or a Credit Note issued against it. Overdue instead of Sent once the due date passes unpaid.

FIELD	VALUE
Invoice number	INV-2026-0001 (from SO-2026-0001)
Customer	Horizon Retail Group (Pvt) Ltd
Amount	LKR 1,400,000
Issue date	2026-07-15
Due date	**NET30 → 2026-08-14**

HOW TO PLACE THE INVOICE

1. From SO-2026-0001, click **Create Invoice from Sales Order** — the line items and amount pre-fill automatically.
2. Review the issue/due dates, then click **Save as Draft** to check it over.
3. Click **Send** — this emails the invoice to Ruwan Jayasuriya and moves it from Draft to "Sent".

Verify: Revenue (4000) increases by LKR 1,400,000; Accounts Receivable (1100) increases by the same amount. The project's "billed to date" now shows LKR 1,400,000.

15 Receivables

Sales → Receivables

What it is: Monitors money customers owe you — which invoices are unpaid, partially paid, or overdue, and when payment is due. A live view built from every invoice's payment status.

FIELD	VALUE
Invoice	INV-2026-0001 — LKR 1,400,000
Payment received	LKR 800,000 by bank transfer, 2026-07-22
Balance outstanding	**LKR 600,000 (still within terms)**

HOW TO RECORD THE PAYMENT

1. Open INV-2026-0001 and click **Record Payment**.
2. Enter amount 800,000, method "Bank transfer", date 2026-07-22, save.

Verify: Invoice status changes to "Partially Paid"; Receivables list shows LKR 600,000 still outstanding for Horizon Retail Group.

16 Recurring Transactions — cycle

Sales → Recurring Transactions

What it is: A template that automatically generates the same invoice (or bill) on a schedule, so you don't manually recreate it every period. Used here for an ongoing service that follows the one-off project.

Cycle: Active (fires automatically each period) → Paused (temporarily stopped) → Cancelled.

FIELD	VALUE
Customer	Horizon Retail Group (Pvt) Ltd
Description	Monthly furniture maintenance & inspection service
Amount	LKR 35,000 / month
Starts	**2026-08-01, monthly**

HOW TO SET IT UP

1. Go to *Sales → Recurring Transactions → New Template*.
2. Customer Horizon Retail Group, description and amount above, frequency monthly, start 2026-08-01.
3. Click **Activate**.

Verify: A recurring template is saved with "Active" status and a next-run date of 2026-08-01 — no invoice generates yet, it fires next period.

17 Subscriptions — cycle

Purchasing → Subscriptions

What it is: The mirror image of Recurring Transactions, but for money *you pay out* — an ongoing vendor charge like rent, software, or a service contract, tracked as a subscription rather than re-entered as a fresh bill every time.

Cycle: Active (charges recur automatically) → Paused → Cancelled.

FIELD	VALUE
Vendor	City Business Park (Pvt) Ltd
Description	Workshop & office space rent
Amount	LKR 85,000 / month
Next charge	**2026-08-01**

HOW TO SET IT UP

1. Go to *Purchasing → Subscriptions → New Subscription*.
2. Vendor City Business Park, description and amount above, frequency monthly.
3. Click **Activate**.

Verify: Subscription shows "Active" with the vendor, amount, and next charge date recorded.

Phase 5 — Reconcile the Bank

By month-end, several of the transactions above have hit the real bank account. Time to match your books against the actual bank statement.

18 Accounts (Bank Accounts)

Banking → Accounts

What it is: The record of each real-world bank account your company holds. Every payment/receipt in this guide happened through this one account.

HOW TO SET IT UP

1. Go to *Banking → Accounts → Add Account*, enter "Commercial Bank of Ceylon — Current A/C", opening balance 2,500,000.

Verify: Commercial Bank of Ceylon — Current A/C exists with opening balance LKR 2,500,000, and its running balance now reflects every transaction from Phases 2–4.

19 Bank Reconciliation — cycle

Banking → Bank Reconciliation

What it is: The process of matching your bank statement, line by line, against what's recorded in your books — so you catch mistakes, timing differences, or bank charges you haven't recorded yet. It's the check that your books and reality agree.

Cycle (per statement line): Unreconciled → Matched to an existing entry (or a new entry created) → Reconciled. A session is "done" once every line is matched and book balance = statement balance.

STATEMENT LINE	AMOUNT	MATCHES TO
Customer receipt — Horizon Retail Group	+800,000	Receivables payment (Phase 4)
Cheque 002451 cleared	−400,000	Cheques (Phase 2)
Bank transfer — Ceylon Timber balance	−280,000	Bill payment (Phase 2)
Reimbursement — Nadeesha Perera	−4,500	Expense Claim (Phase 3)
Company card purchase	−8,500	Card Management (Phase 3)
Bank service charge (new — not yet in your books)	**−750**	**Record as a new bank charge transaction**

HOW TO RECONCILE

1. Upload or manually enter the July bank statement lines above.
2. Match each line to its corresponding transaction — five of the six should auto-match or match with one click.
3. The LKR 750 service charge won't match anything (it's new) — add it directly as a bank charge/expense during reconciliation.
4. Click **Finish Reconciliation** once book balance = statement balance.

Verify: Reconciliation ends with "Book balance = Statement balance" and zero unreconciled lines. Cheque 002451 flips from "Issued" to "Cleared".

Phase 6 — Close the Books

One manual adjustment, then confirm everything ties out, then lock the period so July's numbers can never silently change.

20 Journal Entries — cycle

Accounting → Journal Entries

What it is: The manual, direct way to post a transaction straight to the ledger (as a debit and a matching credit) — used for things that don't come from a normal invoice/bill screen, like depreciation or accruals.

Cycle: Draft → Posted → (optionally) Reversed — a reversal posts an equal-and-opposite entry rather than deleting the original.

ENTRY (JE-2026-0001)	DEBIT	CREDIT
5500 · Depreciation Expense	50,000	—
1610 · Accumulated Depreciation	**—**	**50,000**

This is July's first month of depreciation on the Toyota Hiace van from Phase 3: (3,200,000 − 200,000) ÷ 60 months = LKR 50,000.

HOW TO POST IT

1. Go to *Accounting → Journal Entries → New Entry*.
2. Add the two lines above and click **Post** (not just Save Draft).

Verify: The entry posts and balances (debits = credits = 50,000). Accumulated Depreciation now shows LKR 50,000 against the van.

21 General Ledger

Accounting → General Ledger

What it is: The complete, detailed record of every transaction posted to every account — the single source of truth that the Trial Balance and every financial report is built from.

HOW TO REVIEW IT

1. Open the GL and filter to July 2026.
2. Spot-check Cash/Bank, Accounts Receivable, Accounts Payable, Inventory, Revenue, and Depreciation Expense — you should recognize every posting from this guide.

Verify: Nothing appears in the GL that you can't trace back to a step above — if something unexpected shows up, that's a real bug worth investigating.

22 Trial Balance

Accounting → Trial Balance

What it is: A summary report listing every account's balance at a point in time — its only job is to confirm total debits equal total credits before you trust any report built on top of it (like the Balance Sheet or P&L).

HOW TO PULL IT

1. Pull the Trial Balance as of 31 July 2026.

Verify: Total debits = total credits. If they don't match, something in Phases 1–6 didn't post correctly — don't lock the period until this balances.

23 Fiscal Periods — cycle

Accounting → Fiscal Periods

What it is: The accounting time window (a month, in this guide) that transactions get grouped into. Once you close/lock a period, no one can add or edit transactions dated inside it — so the numbers you reported for July can't silently change in August.

Cycle: Open → Closed/Locked → (can be explicitly Reopened by an admin if a correction is genuinely needed, then re-closed).

HOW TO CLOSE IT

1. Once the Trial Balance above is confirmed correct, close/lock the **July 2026** fiscal period.
2. Try (and expect to fail) backdating a new transaction into July — this confirms the lock is actually enforced.

Verify: July 2026 shows as "Closed"/"Locked". Any attempt to post a new July-dated transaction is rejected or requires explicitly reopening the period first.
